

BONTRAGER

Racks Cross-Reference Matrix

Good Advice to Follow

Bontrager racks are compatible with Trek bicycles that have dropout spacing of 7 inches (186mm) and mounting points on the frame.

The rack could detach if fasteners are not secure. Check the fasteners before every ride.

Improperly distributed luggage could affect the balance of the bicycle. Take care to distribute the luggage evenly between both sides of the rack.

Overloading a bicycle could result in an accident. Refer to the bicycle owner's manual to determine the maximum weight your bicycle can support. To view this manual online, go to the trekbikes.com/manuals page.

A loaded rack could block reflectors and lights. Verify that reflectors and lights are visible after loading the rack.

A rack cannot safely pull a trailer.

⚠ WARNING

Child carriers are not compatible with Bontrager racks. Placing a child carrier on a rack could result in serious injury or death.

⚠ WARNING

A rack that is not compatible with a bicycle cannot be safely attached. Before installing a rack, check the bicycle's mounting locations and weight limit to ensure compatibility. Installing an incompatible rack could result in loss of control or injury.

⚠ WARNING

Loading a rack with items other than luggage could result in serious injury or death.

⚠ WARNING

Follow the instructions when loading a rack. Doing otherwise could result in serious injury or death.

⚠ WARNING

A loaded rack adds weight and raises the bicycle's center of gravity, which can make the bike take longer to stop, become hard to control, and be easier to tip over. Tipping over or loss of control may lead to severe injury or death.

⚠ WARNING

Improperly secured luggage and loose straps could shift, get tangled in the wheel, and cause you to lose control. Follow the instructions to secure luggage and tighten straps. Failure to do so could result in serious injury or death.

Type of rack	Part numbers	Image	Descriptions	Size	Load	Bag compatibility	Use with child carrier	Features & accessories	Mounting hardware
BackRack Lightweight MIK	582179		A rear rack that fits almost every road bike and carries almost anything you need. Compatible with MIK (Mounting is Key) bags for quick, secure trunk bag install.	13–22" (46–62cm)	Max weight capacity 22.7kg (50lbs)	MIK (Mounting is Key) mounting system provides secure, integrated mounting with compatible bags.	Not intended for use with child carriers.	Lightweight, only 465g (16oz)	Frames must have brake bridge or seat stay eyelets. Not recommended for use with carbon dropouts. Includes adapter kit for mounting to most road bikes. Long-lasting, corrosion-resistant, stainless steel hardware.
BackRack Disc MIK	582180 & 582181		An MIK-compatible rack that is easy to mount to disc brake-equipped bike frames.	13–18" (33–52cm) 18–22" (54–62cm)	Max weight capacity 25kg (55lbs)	Adds storage and utility to compatible bikes. MIK mounting system provides secure, integrated mounting with compatible bags. Compatible with MIK, standard trunk bags or panniers.		Integrated eyelets make it easy to mount lights or other accessories.	Quick and easy install. Single-bolt strut mounts allow maximum adjustment and easy installation. 582180, 582181, and 582186 include required mounting hardware. 582180 and 582181 include spacer to fit most disc brake calipers.
BackRack MIK Deluxe MIK Large	582182 & 582184		An easy-to-mount, MIK-compatible rack for larger bike frames that holds panniers and a trunk bag.	582184: 13–18" (33–54cm) 582182: 18–22" (54–62cm)	Max weight capacity 25kg (55lbs)	Additional side stays allow for mounting of both trunk and pannier bags. MIK mounting system provides secure, integrated mounting with compatible bags. Compatible with MIK, standard trunk bags, and panniers.		Integrated eyelets make it easy to mount lights or other accessories.	Single-bolt strut mounts allow maximum adjustment and easy installation. Includes required mounting hardware.
